

Report for Project 1: Animation of student's photo and name

Description for the customized animation (which is the 2nd animation):

"The text will bounce around the screen maintaining its horizontal orientation (for three to four seconds) but never go outside the borders of the animation screen. After it is finished bouncing, it will sit in the lower center part of the screen and flip around on its x-axis until the picture is finished with its animation. The picture will move with the location of the cursor as long as the mouse button is held down. When the mouse button is released, the picture will start spinning (in the manner of a spinning door) and then after a few seconds slowly stop spinning until it comes to a halt at precisely the same moment that the text stops flipping. The text will then center itself above the picture."
